

| Air Pollution Monitoring System

ABSTRACT:

The level of pollution is increasing rapidly due to factors like industries, urbanization, increasing in population, vehicle use which can affect human health. The Air Pollution Monitoring System is used to monitor the Air Quality over a web server using Internet. It will trigger an alarm when the air quality goes down beyond a certain level, meaning when there are sufficient amount of harmful gases present in the air like CO₂, smoke, alcohol, benzene, NH₃ and NO an alarm is triggered. It will show the air quality in PPM on the webpage so that air pollution can be monitored very easily.

The system uses sensors such as MQ135 and MQ6 sensor etc. for monitoring Air Quality as it detects most harmful gases and can measure their amount accurately.
